5th Advanced Engineering Symposium

I would like to thank all of the contributing authors and reviewers to the 5th Advanced Engineering Days (AED) Symposium, 3 December 2022. In this international symposium there are 57 presentations. We would like to see you in the 6th AED which will be held on 4-5 March 2023.

Best regards

Prof. Dr. Murat YAKAR

HONOR BOARD

Ali Hamza PEHLİVAN – Governor of Mersin Province
Prof. Dr. Ahmet ÇAMSARI – Rector of Mersin University
Prof. Dr. Orhan AYDIN – Rector of Tarsus University
Prof. Dr. Ömer ARIÖZ – Rector of Toros University

SCIENCE BOARD

Prof. Dr. Murat YAKAR (Mersin University)
Prof. Dr. İlker Fatih KARA (Mersin University)
Prof. Dr. Mehmet Cihan AYDIN (Bitlis Eren University)
Prof. Dr. Ali Rıza SÖĞÜT (Konya Technical University)
Prof. Dr. Şükrü DURSUN (Konya Technical University)
Prof. Dr. Donato ABRUZZESE (Roma University)
Prof. Dr. Edmönd Höxha (Albania University, Titana Albania)
Prof. Dr. Hysen Mankolli, University of Maryland College Park
Prof. Dr. Erdem KOCADAĞISTAN (Erzurum Atatürk University)
Prof. Dr. Sailesh Iyer (Rai University)
Prof. Dr. Khalil Valizadeh KAMRAN (University of Tabriz, IRAN)
Prof. Spase Shumka (Albania Agriculture University)

Session 1

- 09:00-09.10 **Mardin historical Eski Demirciler (Old Blacksmiths) and Kunduracılar (Shoemakers') Bazaar architectural features**
Lale Karataş, Aydın Alptekin, Murat Yakar
- 09.10-09.20 **Mardin historical Kasaplar (Butchers) Bazaar restoration evaluation**
Lale Karataş, Aydın Alptekin, Murat Yakar
- 09.20-09.30 **Mardin historical Kazancılar Bazaar architectural features**
Lale Karataş, Aydın Alptekin, Murat Yakar
- 09.30-09.40 **Mardin historical Marangozlar (Neccarlar) Bazaar architectural features**
Lale Karataş, Aydın Alptekin, Murat Yakar
- 09.40-09.50 **Mardin historical Kuyumcular (Jewelers) Bazaar restoration evaluation**
Lale Karataş, Aydın Alptekin, Murat Yakar
-

Session 2

- 10:00-10.10 **Measuring PM level in summer season and preparing dispersion modelling for Hacıkaymak Region in Selcuklu, Konya, Türkiye**
Sukru Dursun, Mehmet Buğrahan Çelik
- 10.10-10.20 **Evaluation of water management processes in terms of planning**
Aziz Cumhuri Kocalar
- 10.20-10.30 **Reducing casting defects in ductile iron castings by optimized pouring system**
Mustafa Murat Zor, Serdar Kesim, Ferhat Tülüce, Alper Yoloğlu
- 10.30-10.40 **Determination of the optimum deoxidant addition in steelmaking process and the investigation of an alternative deoxidant material**
Ferhat Tuluçe, Buğra Erbakan, Alper Yoloğlu, Mustafa Murat Zor, Serdar Kesim, Vedat Uz
-

Session 3

- 10.50-11.00 **Usability of cyber security with artificial intelligence**
Hüseyin Fırat Kayıran, Aybüke Ergül
- 11.00-11.10 **Analysis of stresses in rotating cylinders of silicon nitride (Si₃N₄) materials by mathematical modeling**
Hüseyin Fırat Kayıran
- 11.10-11.20 **An overview of solid-state pumps for industrial use**
Mehmet Ali Kurgun, Mehmet Emre Şahin, İskender Özkul
- 11.20-11.30 **Recent CO₂ capture and storage technologies and usage areas**
Ece Kalay, İskender Özkul
- 11.30-11.40 **Comparison of frequently used satellite propulsion systems at a quick glance**
Yasin Kızılgün, İskender Özkul
-

Session 4

- 11.50-12.00 **Comparisons of different deep convolutional neural network and machine learning based methods on gearbox fault diagnosis using small dataset**
Zakaria Miloudi, Aoul Elias Hadjadj
- 12.00-12.10 **Industry 4.0: Key features, adoption, and barriers**
Ramesh Rudrapati, Perumalla Janaki Ramulu, Nikhil Kumar
- 12.10-12.20 **A simple mechanism for controlling and reducing malwares at network level, preventing possible cyber incidents**
Wilma Tomco, Miranda Harizaj, Argenta Prendi
- 12.20-12.30 **A proposed power control solution for industrial application in decentralized energy production**
Miranda Harizaj, Igli Bisha
- 12.30-12.40 **Increasing productivity and energy efficiency in cement industry by using VSM**
Aida Spahiu, Denis Panxhi, Darjon Dharmo
- 12.40-12.50 **PV production forecasting using machine learning and deep learning techniques: Albanian case study**
Darjon Dharmo, Xhilda Dharmo, Aida Spahiu, Denis Panxhi
-

Session 5

-
- | | |
|-------------|---|
| 13:00-13.10 | Assessment of airspace surveillance and control in Albanian territory from the current and historical prospective Fatmir Basholli |
| 13.10-13.20 | Electronic interference and protection from it Ramesh Rudrapati, Perumalla Janaki Ramulu, Fatmir Basholli |
| 13.20-13.30 | Monitoring and evaluation of the quality of electricity in a building Fatmir Basholli, Adisa Daberdini |
| 13.30-13.40 | Cyber security in mail with Fortiweb and Fortinet for companies and institutions Adisa Daberdini, Fatmir Basholli, Novrus Metaj, Elisa Skenderaj |
| 13.40-13.50 | Simulation with the Mirone application for the construction of marine mechanical waves generated by possible seismic events in the territory of the Adriatic and Ionian seas Adisa Daberdini, Fatmir Basholli, Novrus Metaj |
| 13.50-14.00 | Smart digital education in the context of Industry 4.0 technologies Madhuri Vangeti, Ramesh Rudrapati, Parmod Kumar |
-

Session 6

-
- | | |
|-------------|---|
| 14:10-14.20 | Review on impacts of climate change on water resources in Turkey Joudi Rustem, Mustafa Günal |
| 14.20-14.30 | The study of land use and slope role in flow coefficient determination Ayse Yeter Gunal, Ruya Mehdi |
| 14.30-14.40 | Increasing the usage of green concrete in conflict areas Mazen Alhamidi |
| 14.40-14.50 | Comparison of performance evaluation of an existing reinforced concrete structure and post-retrofitting analysis results with linear and non-linear calculation methods Buğra Çeltik, Hüsnü Can |
| 14.50-15.00 | Examination on the contribution of Turkey's building stock future by the regulation of structural joint problems in reinforced concrete buildings according to 2018 Turkish Building Earthquake Code Halil Emre Arıtan, Hüsnü Can |
| 15.00-15.10 | Comparison of a 9-story reinforced concrete structure using the equivalent seismic load method according to the TSC 2007 and TSC 2019 Furkan İnal, Hüsnü Can |
-

Session 7

-
- | | |
|-------------|---|
| 15.20-15.30 | The role of HAMLET in cancer treatment Harika Topal Önal, Furkan Ayaz |
| 15.30-15.40 | Bone grafts' usage areas and β-TCP (tricalcium phosphate) mechanical strength properties Ebru Öner Usta, Furkan Ayaz |
| 15.40-15.50 | Epilepsy disease and treatment approaches Ümmühani Önder, Furkan Ayaz |
| 15.50-16.00 | Heat shock proteins and their functions Havva Türkben, Furkan Ayaz |
| 16.00-16.10 | Immunotoxin effect of Lambda Cyhalothrin (LC) insecticide on mammalian macrophages Ceren Canatar, İsmail Korkmaz, Havva Türkben, Derya Yetkin, Badel Arslan, Serdal Arslan, Furkan Ayaz |
| 16.10-16.20 | Effect of intestinal microbiota on health Ceren Canatar, Furkan Ayaz |
-

Session 8

- 16.30-16.40 **Exosomes and their function**
Begüm Çelik, Furkan Ayaz
- 16.40-16.50 **Studies on cytokine storm**
Şule Merve Aslan, Furkan Ayaz
- 16.50-17.00 **RNA-Based therapeutic oligonucleotide strategies**
İsmail Korkmaz, Gamze Taşkan, Serdal Arslan
- 17.00-17.10 **Effect of breast milk on infant intestinal flora**
Umutcan Hendekci, Furkan Ayaz
- 17.10-17.20 **Transferring Galanthus's stress resistance genes to other plants**
Simay Ayden, Furkan Ayaz
- 17.20-17.30 **Asthma immunopathogenesis and biomarkers in asthma treatment**
Hülya Servi, Furkan Ayaz
- 17.30-17.40 **Application of flow cytometry in plant science**
Deniz Aksoy, Furkan Ayaz
-

Session 9

- 17.50-18.00 **Investigation of homogeneity test of annual total precipitation of Konya Closed Basin with standard normal homogeneity test**
Beyza Değişli, Şeyma Aksu, Nazlı Nergiz, Hilmi Emre Gökteş, Mehmet Selim Geyikli, Vahdettin Demir, Mehmet Faik Sevimli
- 18.00-18.10 **Development of autonomous progress payment system integrated blockchain and IoT technologies in construction industry**
Mehmet Vefa İlgün, Zeynep Işık
- 18.10-18.20 **Experimental investigation of the mechanical properties of geogrid reinforced stone column groups**
Furkan Tüter, Özgür Lütfi Ertugrul
- 18.20-18.30 **Numerical modeling of geogrid reinforced stone column groups with Plaxis 3D**
Furkan Tüter, Özgür Lütfi Ertugrul
- 18.30-18.40 **A physical modeling study on the load -deformation behavior of geosynthetic reinforced stone columns**
Sadi Berkay Dural, Özgür Lütfi Ertugrul
- 18.40-18.50 **Numerical analysis of the geosynthetic reinforced stone columns with Plaxis2D finite element code**
Sadi Berkay Dural, Özgür Lütfi Ertugrul
- 18.50-19.00 **Effect of nano-CaCO₃ on the physical properties of fly ash mortars**
Gani Eren Ererdem, Cahit Bilim
-

Session 10

- 19.10-19.20 **U-Th enrichment in Arıklı ignimbrites: A multivariate statistical analysis**
Cihan Yalçın, Önder Belgin
- 19.20-19.30 **REE and trace element geochemistry of vein type Pb-Zn Deposits: Dadağlı (Kahramanmaraş)**
Yusuf Barbaros Akben, Cihan Yalçın, Yusuf Uras
- 19.30-19.40 **Isotope geochemistry of Koçaşlı Barite mineralization**
Volkan Karasu, Cihan Yalçın, Yusuf Uras
- 19.40-19.50 **Industrial internet of things (IIoT) in energy sector**
Çetin Önder İncekara
- 19.50-20.00 **Clean water for developing countries**
Joudi Borghol, Ayse Yeter Günal
-

Durability

Abstract

In this study, the effects of nano-CaCO₃ addition to mortars with fly ash at different rates on mortar properties were investigated. For this purpose, blended cement mixtures were prepared by using F class fly ash at 15%, 30% and 45% replacement level with CEM I 42.5 Portland cement in weight basis. A total of 12 different mortar compositions were prepared by adding nano-CaCO₃ at 1% and 2% by weight of the binder material in the mortar mixtures. In the preparation of the mortars, the water/binder ratio was kept constant as 0.5 and the sand/binder ratio was 3. The samples produced were kept in the curing pool at 21±1 °C for water curing until the 28th day; unit weight, water absorption and porosity tests were performed to examine the physical properties of the samples. As a result of the experimental studies, the addition of 1% and 2% nano-CaCO₃ was very useful in filling the voids in the mortar and significantly improved the physical properties of the mortars.

Introduction

The high rates of CO₂ emission and consumption of natural resources and energy in the cement production process bring some disadvantages. One of the solutions to this problem is to try to reduce the use of cement.

Fly ash, which is the industrial waste of thermal power plants that generates electricity, can be used in cement systems due to its physical and chemical properties and easy accessibility.

On the other hand, it is known that the use of mineral additives in the cement and concrete industry causes some performance losses such as late setting time and low early strength.

Nanotechnology is seen as one of the promising fields in order to solve the problems encountered as a result of increasing the use of mineral additives in cement-based materials. The use of nanoparticles, which are a product of nanotechnological developments and started to be used in many areas, in cement systems is a relatively new study subject, and there is no study in the literature examining the effects of nano-CaCO₃ addition on the strength and durability properties of mortars with fly ash at different rates.

Material and Method

Within the scope of experimental studies, CEM I 42.5 R Portland cement in accordance with TS EN 197-1 (2012) standard was used [1].

As seen in Table 1, fly ash contained more than 70% (SiO₂ + Al₂O₃ + Fe₂O₃) and less than 10% CaO. For this reason, fly ash used in this study was low lime F class fly ash according to ASTM C 618 (2014) standard [2], but siliceous V class fly ash according to TS EN 197-1 (2012) standard [1].

Nano-CaCO₃, which was used in experimental studies, was supplied as powdered commercial materials from Nanografi Nanotechnology A.Ş., a company based in METU Teknokent Ankara. The product properties and elemental analyze of nano-CaCO₃ are given in Table 2 and Table 3.

Table 1. Chemical and physical properties of the fly ash used

| Chemical and Physical Properties | Results |
|--|---------|
| SiO ₂ , % | 55.94 |
| Al ₂ O ₃ , % | 19.85 |
| Fe ₂ O ₃ , % | 10.11 |
| SiO ₂ +Al ₂ O ₃ +Fe ₂ O ₃ , % | 85.9 |
| CaO, % | 4.78 |
| Na ₂ O, % | 1.20 |
| SO ₃ , % | 0.46 |
| Cl, % | 0.066 |
| Free CaO, % | 0.327 |
| Ignition Loss, % | 1.17 |
| Particle Density, kg/m ³ | 2355 |
| Activity Index, % (28 days) | 78.45 |
| Fineness, % (> 45µm) | 13 |

Table 2. Product properties of nano-CaCO₃

| Product Properties | Purity, % | Size, nm | Density, g/cm ³ |
|--------------------|-----------|----------|----------------------------|
| Results | 99.9 | < 200 | 2.93 |

Table 3. Element analysis of nano-CaCO₃

| Element Analysis, % | MgO | SiO ₂ | Al ₂ O ₃ | Fe ₂ O ₃ | Degree of Activity |
|---------------------|--------|------------------|--------------------------------|--------------------------------|--------------------|
| Results | < 0.35 | < 0.1 | < 0.1 | < 0.1 | 99.9 |

As mortar aggregate in experimental studies; CEN standard sand with a density of 2.56 g/cm³ was used. Sand was produced by Limak Çimento Sanayi ve Tic. A.Ş. in accordance with TS EN 196-1 (2016) standard in 1350 g packages in Trakya Cement Factory [3].

A high rate of water reducer and superplasticizer in accordance with TS EN 934-2 (2013) standard was used in the mixtures [4]. It is recommended to use 0.20 – 2.50 kg additives for 100 kg cement in the product data sheet.

Table 4 shows 12 different cement groups studied.

Table 4. 12 different cement groups studied

| Group No. | Notation | Content |
|-----------|----------|---|
| 1 | OPC | 100% Portland Cement |
| 2 | OPC-1NC | OPC + 1% Nano-CaCO ₃ |
| 3 | OPC-2NC | OPC + 2% Nano-CaCO ₃ |
| 4 | 15FA | 15% Fly Ash + 85% OPC |
| 5 | 30FA | 30% Fly Ash + 70% OPC |

| 8 | 30FA-1NC | (30% Fly Ash + 70% OPC) + 1% Nano-CaCO ₃ |
| 9 | 45FA-1NC | (45% Fly Ash + 55% OPC) + 1% Nano-CaCO ₃ |
| 10 | 15FA-2NC | (15% Fly Ash + 85% OPC) + 2% Nano-CaCO ₃ |
| 11 | 30FA-2NC | (30% Fly Ash + 70% OPC) + 2% Nano-CaCO ₃ |
| 12 | 45FA-2NC | (45% Fly Ash + 55% OPC) + 2% Nano-CaCO ₃ |

The unit weight test was carried out on prismatic mortar samples measuring 40x40x160 mm. The 28-day-old samples, which were left to dry in an oven at 100 °C for one day, were weighed on a precision scale, and their unit volume weights were found by dividing their geometric dimensions.

The water absorption and porosity tests were carried out on 28-day-old prismatic samples with the dimensions of 40x40x160 mm and a water/binder ratio of 0.5. The samples, which were saturated with water in the curing pool at 21±1 °C, were weighed with the help of Archimedes balance. With this method, the weights of the samples in the water were determined, their outer surfaces were dried and their saturated surface dry weights were determined. The dry weights of the samples, which were kept in a laboratory oven at 100 °C for one day, were determined. Finally, the water absorption and porosity ratios of the samples were calculated.

Results and Discussion

When the unit weight test results in Table 5 are examined, nano-CaCO₃ reduced the values in all groups. It was observed that this situation was caused by the density difference between the cement and the nanoparticles.

Table 5. Unit weight test results

| Group No. | Notation | Unit Weight (kg/m ³) 28 th day |
|-----------|----------|--|
| 1 | OPC | 2095 |
| 2 | OPC-1NC | 2030 |
| 3 | OPC-2NC | 2003 |
| 4 | 15FA | 2078 |
| 5 | 30FA | 2050 |
| 6 | 45FA | 2005 |
| 7 | 15FA-1NC | 2033 |
| 8 | 30FA-1NC | 2027 |
| 9 | 45FA-1NC | 1994 |
| 10 | 15FA-2NC | 2018 |
| 11 | 30FA-2NC | 2007 |
| 12 | 45FA-2NC | 1988 |

Looking at the data in Table 6, nano-CaCO₃ reduced the porosity of the mortars and thus the water absorption. This situation also shows us that nanoparticles have a potential as a space filling material.

Table 6. Water absorption and porosity test results

| Group No. | Notation | Water Absorption, % 28 th day | Porosity, % 28 th day |
|-----------|----------|---|-------------------------------------|
| 1 | OPC | 8.77 | 17.41 |
| 2 | OPC-1NC | 8.55 | 17.32 |
| 3 | OPC-2NC | 8.38 | 16.89 |
| 4 | 15FA | 8.39 | 16.89 |
| 5 | 30FA | 8.00 | 16.51 |
| 6 | 45FA | 7.95 | 16.34 |
| 7 | 15FA-1NC | 8.29 | 16.54 |
| 8 | 30FA-1NC | 7.94 | 16.02 |
| 9 | 45FA-1NC | 7.84 | 15.89 |
| 10 | 15FA-2NC | 8.14 | 15.94 |
| 11 | 30FA-2NC | 7.88 | 15.84 |
| 12 | 45FA-2NC | 7.83 | 15.43 |

Conclusion

Unit weight test results showed that nano-CaCO₃ addition decreased unit weight values in all mortars. As the nano-CaCO₃ addition increased, the decrease in unit weight values continued. The addition of nano-CaCO₃ decreased the water absorption and porosity ratios in all mortar groups. As the nano-CaCO₃ addition increased, its contribution to the decrease in water absorption and porosity continued.
