Abstract of RU2663639 (C2)

FIELD: medicine.SUBSTANCE: group of inventions refers to the field of medicine, the selection of personnel and is designed to provide a universal definition of the visual perception of candidates. Computerized test system that determines the visual perception of candidates contains platform, keyboard for data entry, installed on the platform, sound adapter for converting data into auditory elements, hard drive for data storage, display adapter for converting the received information into visual elements, monitor connected to the display adapter. In this case, the test system comprises at least one group of images with at least two images having distinctive properties, information about which is stored on the hard disk, at least one closed region and
