OP. 652 DO PARENTAL ATTITUDES OF BASKETBALL COACHES EFFECT TO THEIR PERCEPTION OF LEADERSHIP AND LIFE SATISFACTION?Turhan Toros¹¹ Mersin University School of Physical Education and Sports**Abstract**

Aim: This study aimed to research to parental attitudes of basketball coaches effect to their perception of leadership and life satisfaction or not.

Method: 244 men's basketball coaches (Xage: 35,26 ± 8,16) was become a participant as a volunteer to this research. Below measurements and the inventory was applied to all participants. The inventory is; Parent attitudes inventory which powered by Kuzgun & Eldeklioğlu (1996). The measurements are; 'Scale of Leadership in Sports' which powered by Chelladurai & Saleh (1978; 1980) and this measurement was adapted to Turkish athletes by Toros & Tiryaki (2006). 'Scale of Life Satisfaction' which powered by Diener, Emmons, Larsen ve Griffin (1985) and was translated to Turkish by Yetim (1991). Pearson correlation, multi regression analysis and one-way ANOVA were implemented while data analyzing.

Results: There are some positive relations occur between parent attitudes points and life satisfaction points. In addition There are some negative relations occur between authoritarian, protective parent attitudes and life satisfaction. According to the relations tested to suitability for regression analysis and modelling. The model created after extraction with variable elimination method, and then this model was analyzed by enter & hierarchical. As the result democratic parent attitudes variables were positive, authoritarian parent class variables were negative. Leadership behaviour was positive effected to life satisfaction in hierarchical regression analysis.

Conclusion: Basketball coaches life satisfaction points were determined in high level when examined according to leadership behavior differed.

OP.658 RELIABILITY AND VALIDTY OF NEW VERSION OF SPORTS IMAGERY ABILITY QUESTIONNAIREEsen Kızıldağ Kale¹, Ünsal Yetim ²¹ Eskişehir Sport Club² Mersin University Faculty of Letters Department of Psychology**Abstract**

Purpose: The purpose of this study was to developed Sports Imagery Ability Questionnaire New Version (SIAQNV) for identify what kind of imagery ability used by athletes.

Method: In this study, initially it was decided to adapted Sports Imagery Ability Questionnaire- SIAQ which was developed by Williams and Cumming (2011) and consisting 15 items and five subscales in order to evaluate athletes' imagery ability. But as a result of the factor analysis it was decide that this questionnaire can not be used for the Turkish population. A new sports imagery ability questionnaire was decided to develop that imagery ability of athletes could be changed by one culture to another due to cultural adaptation, perceptual differences and the characteristics of the athletes in the country.

Results: Voluntered 283 athletes, who were 180 males (Age: 21.35± 3.77years; Sport age: 8.04±3.76years) and 103 females (Age: 21.2±3.97years; Sport Age: 8.58±4.10years) totally from 3 different sports (athletics, handball, football), were participated to this questionnaire. The questionnaire consists of 5 subscales and 25 items. As results of principle component factor analysis, Questionnaire's subscales were found with Strategy Imagery (4 items), Ability Imagery (6 items),
